

## **IDEATION PHASE**

### **PROBLEM STATEMENT**

DATE	10 October 2022
PROJECT NAME	Fertilizer Recommendation System For Disease Prediction
TEAM ID	PMT2022TMID16002
MAXIMUM MARK	2 Marks

#### **Problem Statement:**

Agriculture is the most important sector in today's life. Most plants are affected by a wide variety of bacterial and fungal diseases. Diseases on plants placed a major constraint on the production and a major threat to food security. Hence, early and accurate identification of plant diseases is essential to ensure high quantity and best quality. In recent years, the number of diseases on plants and the degree of harm caused has increased due to the variation in pathogen varieties, changes in cultivation methods, and inadequate plant protection techniques. An automated system is introduced to identify different diseases on plants by checking the symptoms shown on the leaves of the plant. Deep learning techniques are used to identify the diseases and suggest the precautions that can be taken for those diseases.
